SUVODA®
Trial wisely

Sofia
An AI Assistant on the Suvoda Platform

Sofia, the new AI Assistant on the Suvoda Platform, simplifies clinical trial management by delivering efficient access to trial data, insights, and visualizations through an intuitive chat interface, reducing what were once multi-screen, multi-click processes to simple conversations.

And because Sofia is built on the Suvoda Platform, users will have real-time and streamlined access to mission-critical, time-sensitive data. So, sponsors can take command over the most urgent moments in their clinical trials, allowing them to Trial Wisely.

Sofia is currently available for drug supply managers using Suvoda IRT, with plans to expand to other users and products across the Suvoda Platform.

3 Pillars of Sofia

Reliability
Accuracy is paramount. Suvoda has developed Sofia with verification steps and safeguards so trial data cited in conversational responses is never made up.

Teachability
Unlike traditional AI and self-learning models, Suvoda has built a teaching model in which subject matter experts teach Sofia how to answer questions with instructions in plain English. Sofia will only answer questions that Sofia has been taught. Currently, Sofia can answer more than 100 questions on 20 different topics and the knowledge base will only continue to grow.
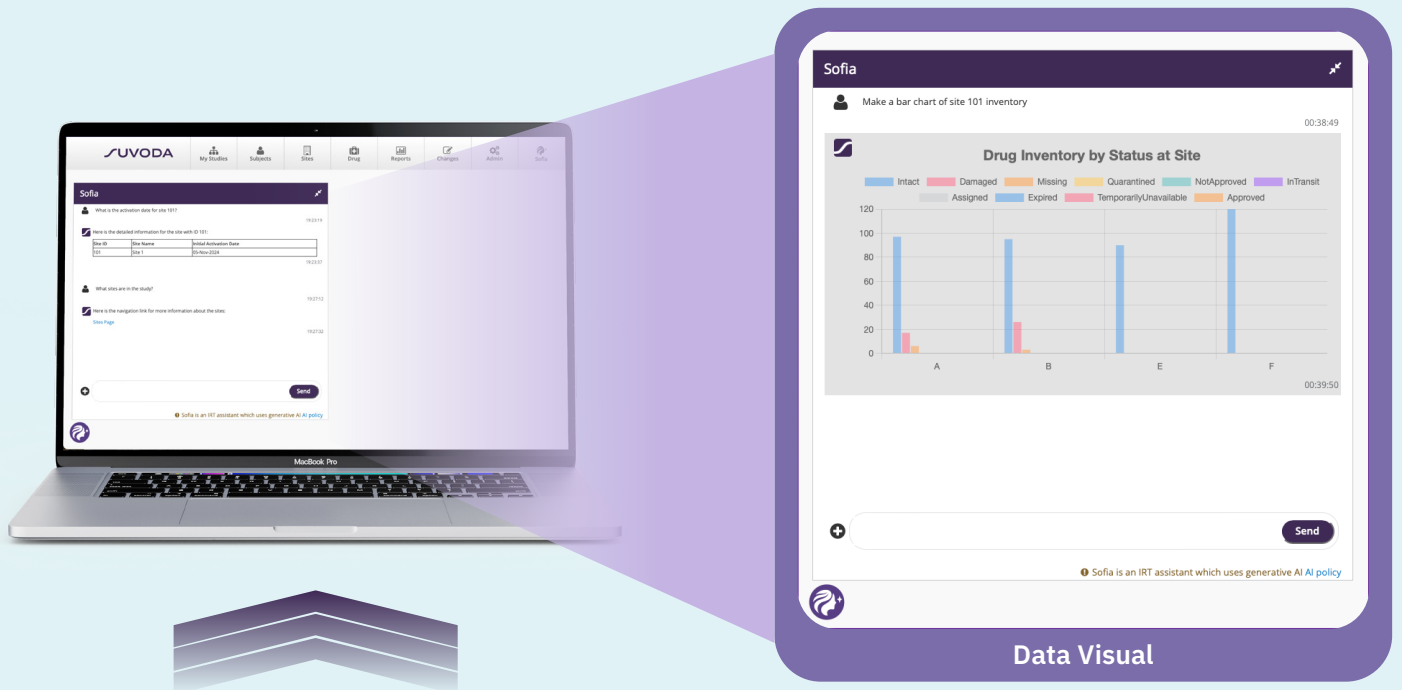

Security
Sofia has a zero-day retention policy so data is only retained long enough to support user queries and it is never used in public training models.

SUVODA®

How do you use Sofia?

It is as simple as opening a chat window and engaging with Sofia in a conversation.

Data Visual

Sofia can answer through:

⟩ Text Response

Sofia can quickly retrieve data from the system and answer questions in the preferred language of the user, enabling users from across the globe to get critical information without navigating away from their current page or creating a report.

⟩ Navigation Links

Sofia can generate hyperlinks to pages in the system, allowing users to quickly navigate to relevant areas of the application.

⟩ Reference Material Summaries

Sofia can access reference materials like user manuals to help answer user queries. Sofia will summarize the relevant section, then provide a link to that exact page.

⟩ Data Visuals

Sofia can create tables and charts to represent data in a more visual manner for users.
