

Trial wisely

eCOA Licensing and Localization

WHY SUVODA

- + **Flexible development process** that uses strategies enabling study teams to adapt to staggered or changing study timelines
- + License holder requirement and process library to **more efficiently obtain licenses** on behalf of sponsors and for better visibility of timeline dependencies
- + Third party partner with **established license holder relationships** and implementation guides
- + Platform API allows third party translation partner to **directly apply translations** and view updates to screens in real time

Suvoda's eCOA is built with the same rigorous development processes and supported by the same exceptional client services teams that you've grown accustomed to with your IRT. Our tool is designed to empower your team to manage the movement of devices and assessments — as securely and flexibly as our IRT system manages your drug supply — and makes complete, accurate, and protected outcomes data available whenever you need it.

To create the most efficient process for you, the Suvoda eCOA Licensing and Localization team will work in tandem with your existing IRT project team from the beginning of system development. Our experts will provide guidance throughout the process to enable you to manage the different licensing and localization timelines, while minimizing the variables that typically occur with eCOA deployment.

The built-in flexibility of Suvoda eCOA allows teams to more easily adapt to changing needs from development through trial execution.

The translation and localization process and timelines are aligned with the eCOA and IRT system development timelines so that all languages can be deployed at the same time as the system.

LEVEL	DESCRIPTION	TIMING (in business days)
Level 1	Once Forward	8-12 days
Level 2	Once Forward, Once Back (with reconciliation)	10-20 days
Level 3	Twice Forward, Once Back (with reconciliation) (harmonization)	15-20 days
Level 4	Twice Forward, Once Back (harmonization & cognitive debriefing)	15-20 days for harmonization 25-35 days for cognitive debriefing

*These timelines do not include project set up or finalization timelines

While translation timing is dependent upon number of languages and the level of translation required, this table provides Suvoda's typical timeframes.
