

SUVODA®

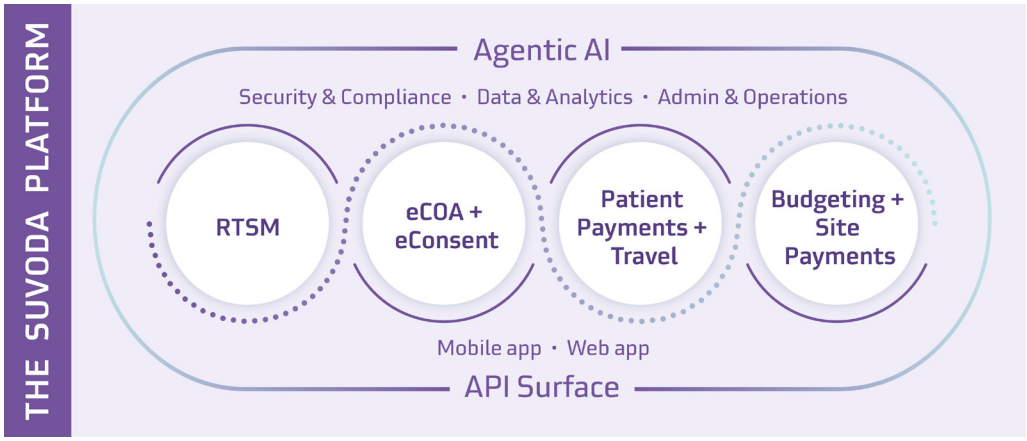

Trial wisely

Streamlined Deployment and Patient Data Collection

Suvoda eCOA is purpose-built with users at the center

- A single patient app and patient-centric workstream
- Reduced integrations and a single data model
- Agentic AI built on the proven, patented Suvoda Platform
- A consultative, services team with deep expertise

Seamlessly manage mission-critical, time-sensitive moments of the patient journey with the Suvoda Platform. By delivering real-time data that informs decision-making through critical moments like randomization, endpoint collection, and patient payments, the Suvoda Platform eases the experience for sponsors, CROs, and sites. Suvoda's patented technology enables rapid and compliant design and deployment powered by agentic AI and tailored by the expert Suvoda services team that brings deep clinical trial knowledge to every trial — advising, anticipating, and partnering through the full lifespan of a study. Embrace the inherent complexities and constant change with a modern, precision-built platform that supports calm action and confident decisions to move life-changing studies forward.

eCOA for confident clinical trials

Purpose-built with users at the center, Suvoda eCOA delivers quality patient outcomes data, more efficiently. With exceptional functionality to solve common and unique challenges of eCOA implementations, Suvoda eCOA and our expert scientific, licensing and localization, and operations services teams can do exactly what your study needs, so you can deploy eCOA with confidence.

USER EXPERIENCE

100%

of usability testers had an easy time navigating Suvoda eCOA

DESIGN

100%

of usability testers were happy with the visual experience

DEVICE

93%

of usability testers appreciated touchscreen responsiveness and ease-of-use

BENEFITS OF SUVODA eCOA

CONNECTED eCOA WORKFLOWS: The Suvoda Platform helps site teams move from one workflow to the next with less friction and clear next steps.

- eCOA + RTSM/IRT: High-quality participant outcomes data informs critical moments like screening, randomization, and dose adjustments—helping drive actions in line with your protocol.
- eCOA + PATIENT PAYMENTS: When enabled for a study, micropayments can automatically trigger a payment after a participant completes a questionnaire—without a separate integration or manual tracking.

PURPOSE-BUILT FOR PATIENTS, SITES AND STUDY TEAMS: Patients, sites, and study teams will find the user experience to be intuitive, easy to navigate, and well-designed as validated through usability testing conducted by RWS Life Sciences.[1] With the intuitive, easy-to-use Suvoda App, patients can complete questionnaires,submit receipts and receive payments, and view travel details, on a mobile device or from a web browser. For sites, in-clinic eCOA workflows are seamlessly completed across site computers and tablets or with provisioned devices.

MEET SOFIA, YOUR AI ASSISTANT FOR CLINICAL TRIALS: Sofia, Suvoda's AI assistant, helps sites, sponsors, and CROs access trial data, get answers, and take action—all through a conversation they can trust. For example, a site user can ask, "Which participants at my site have the lowest questionnaire compliance?"

EXPERT SCIENTIFIC AND OPERATIONAL GUIDANCE: Throughout the lifecycle of a study, sponsors are supported by a dedicated, single, cross-functional project team augmented by our in-house scientific team team that will review clinical protocols, study design, and regulatory considerations.

STREAMLINED QUESTIONNAIRE LICENSING, LOCALIZATION, AND DESIGN: In-house experts manage the end-to-end process of licensing, translation, and localization, and Suvoda's patented Questionnaire XD expedites and decouples questionnaire definition from the study build, accelerating timelines and enabling sponsors to implement a single questionnaire across multiple studies.

SIMPLIFIED DEVICE LOGISTICS MANAGEMENT: Supported by more than a decade of experience managing critical moments in over 6,000 trials, the experienced Suvoda logistics management team simplifies eCOA global device logistics.

KEY FEATURES

+ Streamlined workflows and timelines with eCOA + RTSM/IRT implementation
+ Global deployment and support for BYOD through the Suvoda App, provisioned devices, and hybrid models
+ On-device notifications and alarms
+ Licensing and localization including right–to-left languages
+ Multilingual technical support
+ In-app translation vendor collaboration
